Psychology

A-level

Introduction

Why do we sometimes forget things the moment we walk out of a room? Can we make stress our friend rather than it being such a negative experience? And how do we explain why people develop behaviours like phobias or OCD?

Psychology offers students an engaging and stimulating course to discover insights into the reasons behind human behaviour, helping them to gain not only a better understanding of their own behaviour, but of those around them too. Psychology has a big impact on all areas of life, particularly in informing education and teaching, directing medical and health support services with issues like depression and phobias, shaping businesses and advertising, and engaging with efforts to reduce and reform criminal behaviour.

Psychologists help by applying scientific methods to obtain a better understanding of behaviour. This includes observing, measuring, testing and carrying out statistical analysis with individuals and groups to gain relevant information to support different situations. This enables psychologists to find solutions to problems in various settings.

Why Psychology?

- A-level Psychology offers a science with cutting edge research that has real world implications for issues in everyday life, all within a course that has academic integrity and skills that Higher Education and employers value.
- Studying Psychology develops a range of valuable skills including critical analysis, independent thinking and research, as well as a deeper understanding of the dynamics of human interaction and communication.
- Psychology will give you a relevant qualification appropriate to a range of occupations including teaching, management, nursing, marketing, counselling and a number of professional fields such as clinical, forensic and educational psychology.
- With the far-reaching implications of Psychology, it works very well with other A-level subjects such as Biology, English, Law, Sociology and Religious Studies to name a few; however, the skills learned on the course equip and support students in many other subjects too.

Any special requirements?

No prior knowledge of psychology is necessary. A minimum of a grade 5 in English, as well as a grade 5 in Mathematics is necessary in order to complete the Research Methods and Statistical components of the course. Students need to be aware of the scientific nature of psychology in terms of biological explanations and data analysis.
